DESCRIPTION

Automate the process of updating Name and Address details using BP transaction.

Key Process Flows

- The bot takes input details from the user.
- Opens transaction from any session of the SAP Logon (SAP GUI), without interrupting user's work
 - Note:** Maximum number of Sessions should be below 6.
- Opens BP transaction.
- Updates the Name and Address details.

Business Benefits

- Reduce manual effort—an employee can concentrate on the more important tasks
- Ensure fast updating of Name and Address details
- Eliminate the human error

VERSION

The product versions used to generate this sample are detailed below. This sample is provided “as is,” with no warranty that it will work correctly with other versions. If some versions of your software are different (such as the tool version or the target application version), you may need to recapture the application and/or update the workflow activities.

SAP Intelligent RPA

The table below details the versions used to generate this sample.

Software	Version
Cloud Studio	2.0
Desktop Agent	2.0.10.58

Target Application	Version
Saplogon.exe	750

PREREQUISITES

Global setup:

SAP Intelligent Robotic Process Automation must be installed in accordance with the installation guide available [here](#). An SAP Intelligent RPA Factory must be available with a suitable environment and a hierarchy. All information can be found in the “Getting Started” section accessible via the above link.

Configuration:

The bots are designed to be executed in attended mode only.
