

# Activation Accelerators - In-App Configuration for SAP S/4HANA Cloud Scope Items J60 and 1NT (6PT)

## Task automation Capability and Feature Highlights

### THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the J60 and 1NT scope items. This process is very time-consuming, error-prone, and adds lot of manual effort.

### TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configurations using the values provided in the input configuration file:
  - Business Rule Framework (BRF)+ Settings for Payment Advice (J60)
  - Business Rule Framework (BRF)+ Settings for Printed Checks (J60)
  - Business Rule Framework (BRF)+ Settings for Supplier Balance Confirmation (J60)
  - Business Rule Framework (BRF)+ Settings for Item Interest Calculation (J60)
  - Business Rule Framework (BRF)+ Settings for Payment List (J60)
  - Manage Teams and Responsibilities (1NT)

### BUSINESS VALUE – BENEFITS

Automates the BRF+, teams and responsibilities, and other settings for the J60 and 1NT scope items, which reduces manual effort and speeds up implementation process.
