Shopping cart Bot (Workflow)

Business Process Automation using SAP IRPA

Incture[®]

Version: 1.0

Document History:

Date Issued	Version	Change Reference	Author
16/02/2022	V1.0	Version 1.0	

Description

Every person will need to shop the products for their daily or monthly basis also the need the price framings and discounts every day we can't search all the products and get the data to compare every time so, instead of the manual process (Manual effort) Bot will establish the required engagement with Shopping cart and gives the best outcomes.

Applications involved

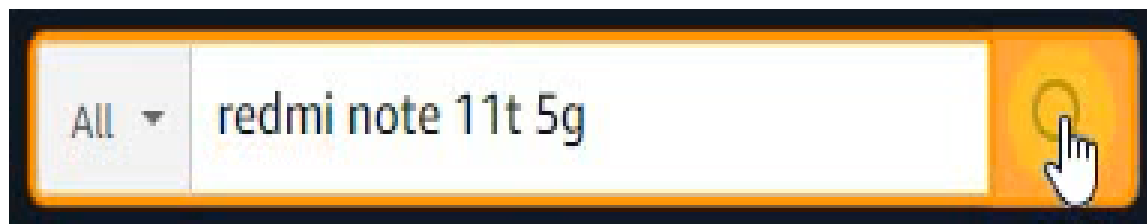

- SAP IRPA
- Shopping site (Third party application)
- MS Excel

Dependencies

- Core SDK
- Excel SDK

Required Inputs

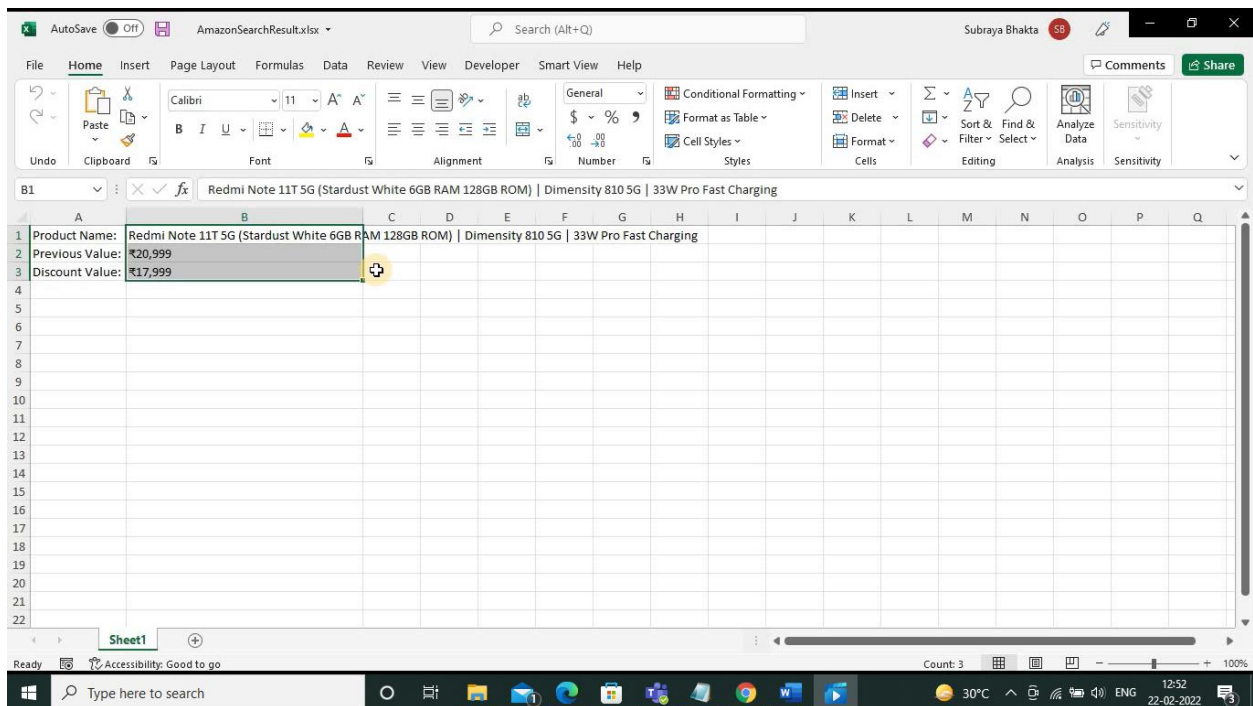

Input	Description
Product name	Provide the Product name that we need the pricing details.
Condition	Check the Loaded screen of shopping cart is exactly same as per user screen.
Notification	Where to store the details of data (attach the excel).

s

Process Steps

- **Step1:** Bot will connect with Browser and opens Shopping cart website.
- **Step2:** Once page successfully Loaded bot search for product with name as per user wish.
- **Step3:** Clicks on enter after giving the name of product.
- **Step4:** Once product loaded with data bot starts extracting the Brand name, Product name, original price, Price after discount (discounted price).
- **Step5:** Once the required data is captured or extracted bot connects with excel and saves all the data.

Business Benefits

- Deploy and use immediately
- Customizable based on requirement
- Increased productivity
