Configure iFlows for ICI for SAP S/4HANA (Buy Side) adapter 3

Configure iFlows for ICI for SAP S/4HANA (Buy Side) adapter

What: With this release, in addition to the existing token-based authentication, users can now set up OAuth based authentication with their integration.

The ICI for SAP S/4 HANA (Buy Side) adapter has master data integration capabilities that offers extensibility. These iFlow configurations align with the best practices for successful implementations and to meet the customer specific requirements.

These features enhancements help to configure the master data integration between Icertis Contract Intelligence (ICI) platform and SAP S/4HANA using SAP Cloud Integration.

Based on your business requirements, you can configure the following:

- **Configure ICI masterdata contract type**

The name of the ICI masterdata contract type to which the data must be synced.

- **Configure add or modify existing mappings**

Add or modify mappings and mapping expressions for transformation.

- **Configure pre-exit and post-exit methods**

Pre-exit and post-exit iFlows to enable mapping modifications and data transformations. Pre-exit iFlow enables extension of source payload (SAP S/4HANA), while the post-exist iFlow allows updates at the target end (ICI).

- **Configure filtering criteria**

Filter records dynamically based on query expression provided for the master data sync process. To support this pre-exit and post-exit methods are available.

- **Store primary supplier location in Supplier Location Master**

You can choose to keep all supplier location information in a separate Supplier Location Master in addition to the primary supplier in the Supplier Master.

Advantages:

- Offers flexibility and configurability to users to set up the adapter according to their business requirements.
- OAuth based authentication ensures secure connectivity.

How: To configure the adapter you need to see the integration package available in the SAP API Hub. For more information, see the ICI for SAP S/4HANA (Buy Side) Configuration Guide.

Feature ID: 1762905

Note: The ICI for SAP S/4HANA (Buy Side) adapter version 1.0.1 is compatible with the following versions of ICI: 8.4.x and 8.3.x.
