## INTRODUCTION

This document describes the SAP Build Process Automation sample **Manage files using FTP** and provides the following information:

- Description (functional and technical)
- Version used to generate this sample

It also contains information on prerequisites, such as the steps to follow before launching the agent.

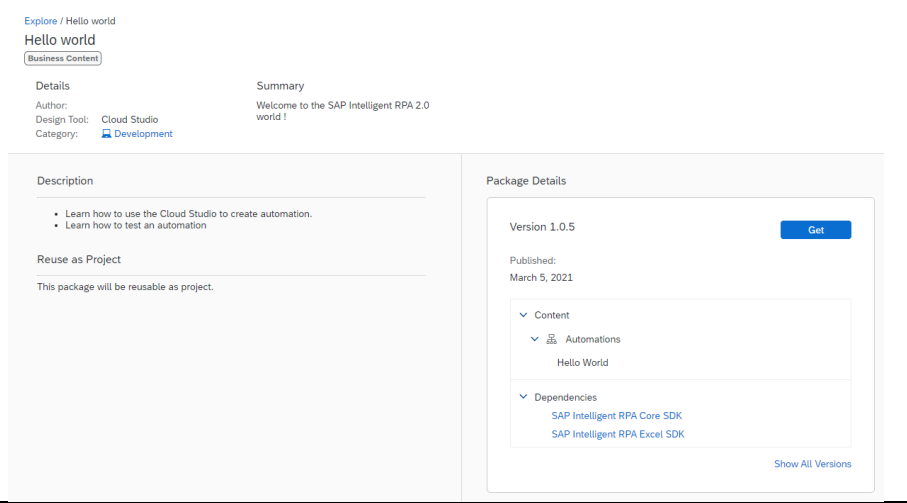

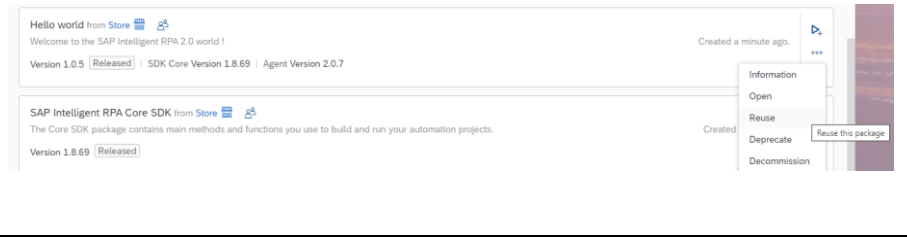

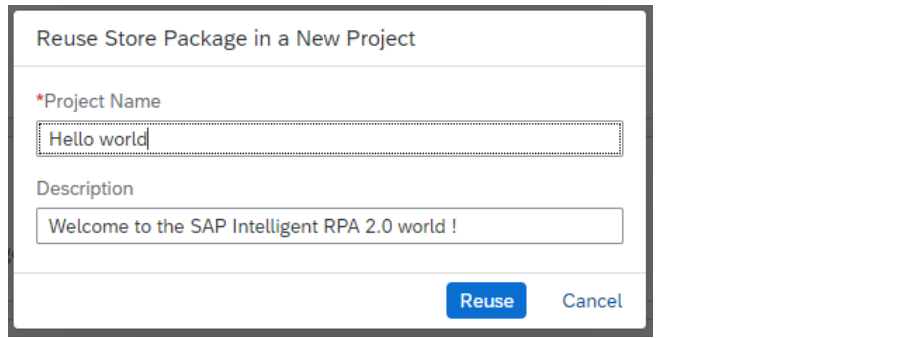

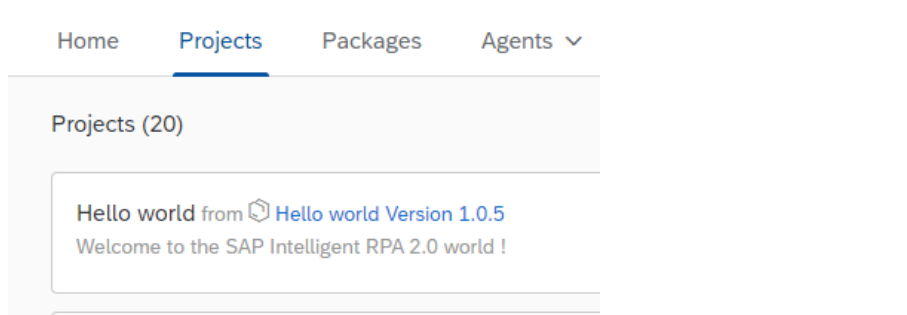

## IMPORTANT RECOMMENDATION

### General

To use this sample, you need to have a basic knowledge and understanding of SAP Build Process Automation tool. At the very least you need to know how to build an automation, add and modify activities and generate a package.

### Reuse the sample as a new project

*Note: screenshot might display a different name than the one of this sample.*

| <p>Open the project that has just been created.</p>  |  <p>Home Projects Packages Agents</p> <p>Projects (20)</p> <p>Hello world from Hello world Version 1.0.5<br/>Welcome to the SAP Intelligent RPA 2.0 world !</p>  |
| <p>If needed, update the content of this project, and generate a new package from it.</p>  |  |

You need to execute this procedure to be able to open the project and see all its content (the captured applications, the declared items, the automations, etc.).

## DESCRIPTION

This package contains captures, datatype and automations that are described below. See chapter Version for more details about the version of the Desktop Agent and the SDK dependencies.

### Settings

This section describes the settings of the project such as environment variables or dependent packages that are used in the automation.

#### **Environment variables**

N/A

#### **Dependent packages**

N/A

### Captures

This section describes the captures which were made to pilot the application in this sample. It will also describe the different methods which were used to capture the pages and declare the items.

N/A

### Datatypes

This section describes the datatype used in this sample. It describes the structure of the datatype and where it is used in the automations.

N/A

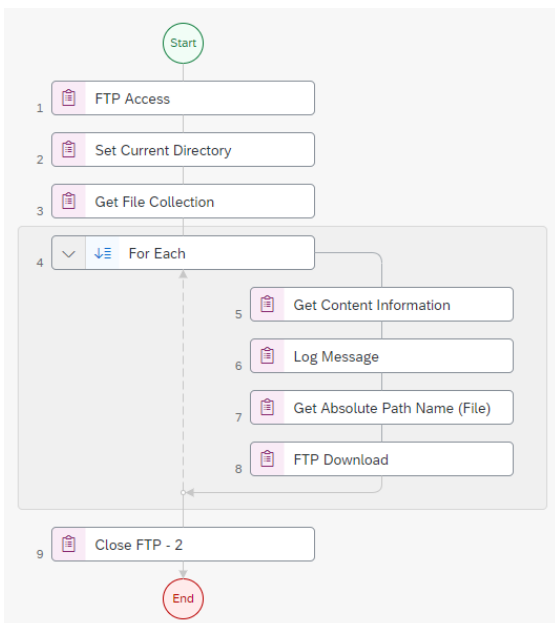

### Automations

#### **Download files**

**Type:** Attended

**Input:** Host (type = String), credentials (type=Credentials), RemoteFolderPath (type = String), Type (type = String), LocalFolderPath (type = String)

**Output:** None

The agent will connect to the FTP using the credentials and info provided as input parameters.

It will then change directory to work in the folder RemoteFolderPath. From there it retrieves the list of files and it will download them all

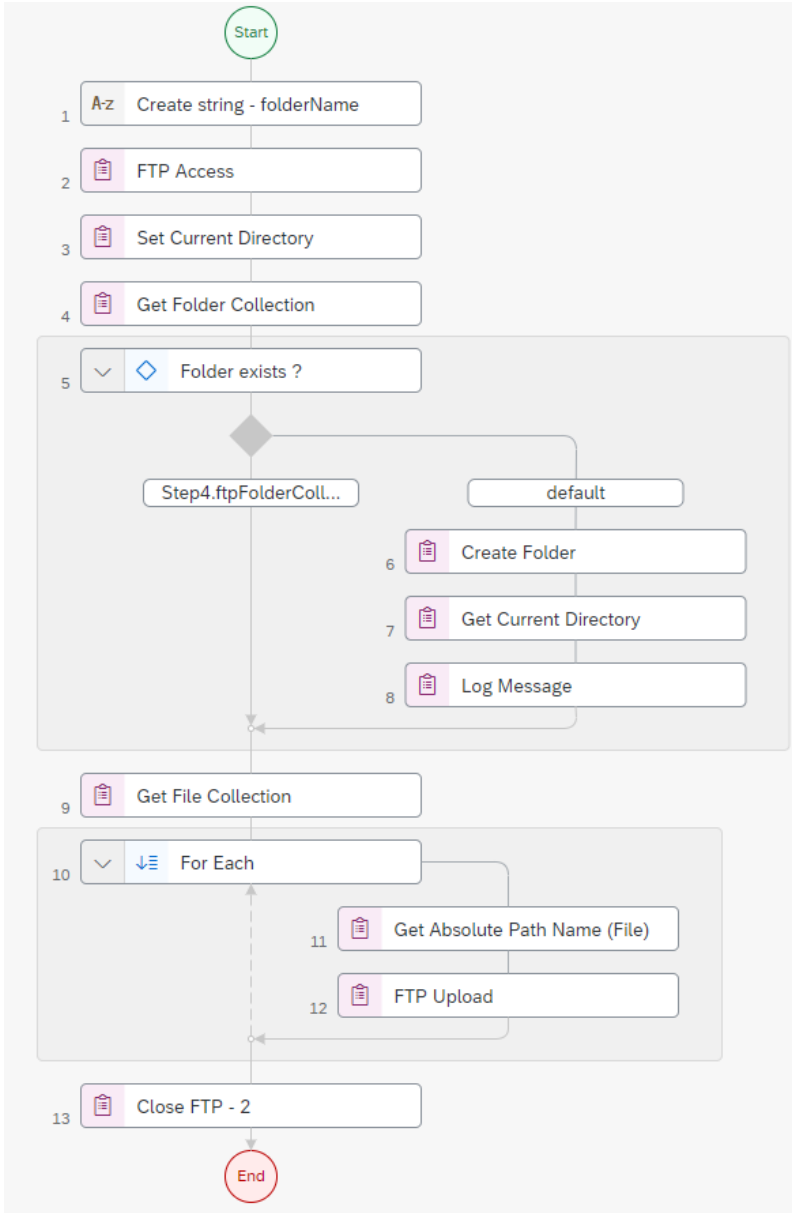

At the end of the automation, or in case of error, the agent closes the connection.

### Upload files

**Type:** Attended

**Input:** Host (type = String), credentials (type=Credentials), RemoteFolderPath (type = String), Type (type = String), LocalFolderPath (type = String)

**Output:** None

The agent will connect to the FTP using the credentials and info provided as input parameters.

It will then change directory to work in the folder RemoteFolderPath.

It will check for the existence of the folder which name is declared in step 1 and create the folder if it does not exist.

It will then retrieve the list of files to upload and upload them to the FTP server.

At the end of the automation or in case of error, the agent closes the connection.

## **VERSION**

The product versions used to generate this sample are detailed below. This sample is provided “as is”, with no warranty that it will work correctly with other versions. If some versions of your software are different (such as the tool version or the target application version), you may need to recapture the application and/or update the workflow activities.

### **SAP Build Process Automation**

This sample targets the Desktop Agent **2.0.11** or higher.

The following SDK dependencies were used to generate this sample: 1.24.58

See [documentation](#) for more details about the compatibility between SDK version and Desktop Agent.

### **Target application**

N/A

## PREREQUISITES

### **Global setup**

SAP Build Process Automation must be installed in accordance with the installation guide available [here](#). An SAP Build Process Automation Factory must be available with a suitable environment (containing an agent). All information can be found in the “Getting Started” section accessible via the above link.

### **Specific steps to follow before launching the agent**

N/A

**EXPECTED OUTPUT**

N/A
