

Activation Accelerators - In-App Configuration for SAP S/4HANA Cloud Scope Items 1LQ (6PP)

Task automation Capability and Feature Highlights

THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the 1LQ scope item.

This process is very time-consuming, error-prone, and adds lot of manual effort.

TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configuration using the values provided in the input configuration file:
 - Maintain Print Queues
 - Maintain Email Templates
 - Manage Logos

BUSINESS VALUE – BENEFITS

Automates the Output Management configuration (1LQ), which reduces manual effort and speeds up implementation process.
