

Activation Accelerators - Mass Upload of Business Configuration for SAP S/4HANA Cloud, public edition

Task automation Capability and Feature Highlights

THE PROBLEM

During SAP S/4HANA Cloud, public edition implementations, there is a phase where fine-tuning is required in business configuration. Currently, there are +1000 configuration activities that support the creation of new configuration using Excel templates, but the implementation user must manually execute the upload task one at a time. This process is very time-consuming, error-prone, and adds a lot of manual effort.

TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation starts the configuration activity app and uploads the corresponding configuration template.

BUSINESS VALUE – BENEFITS

Automates uploading of business configuration, which reduces manual effort and speeds up implementation process.

Customer downloads and fills the business configuration templates

Task automation consumes these templates

6PX task automation

SAP Build Process Automation

- 1 The task automation opens the required configuration app based on input configuration file.

SAP S/4HANA Cloud, public edition

- 2 The task automation triggers the import option and uploads the corresponding template.
