## IMPORTANT NOTE

### General

To use this sample, you need to have a basic knowledge and understanding of SAP Intelligent Robotic Process Automation tool. At the very least you need to know how to import a project, add and modify activities, build the solution, and export a package.

### Required Inputs:

| <b>Input Field</b>         | <b>Description</b>  |              |                    |   |                      |   |           |   |              |   |                      |
|----------------------------|---|--------------|--------------------|---|----------------------|---|-----------|---|--------------|---|----------------------|
| <b>Price</b>               | Enter the required price for the Change Price transaction.  |              |                    |   |                      |   |           |   |              |   |                      |
| <b>PriceCategory</b>       | Enter Price Category index number. <table border="1"><thead><tr><th><b>Input</b></th><th><b>Description</b></th></tr></thead><tbody><tr><td>1</td><td>Quantity-based Price</td></tr><tr><td>2</td><td>Flat rate</td></tr><tr><td>3</td><td>Rental price</td></tr><tr><td>4</td><td>Time-Dependent Price</td></tr></tbody></table> | <b>Input</b> | <b>Description</b> | 1 | Quantity-based Price | 2 | Flat rate | 3 | Rental price | 4 | Time-Dependent Price |
| <b>Input</b>               | <b>Description</b>  |              |                    |   |                      |   |           |   |              |   |                      |
| 1                          | Quantity-based Price  |              |                    |   |                      |   |           |   |              |   |                      |
| 2                          | Flat rate   |              |                    |   |                      |   |           |   |              |   |                      |
| 3                          | Rental price  |              |                    |   |                      |   |           |   |              |   |                      |
| 4                          | Time-Dependent Price  |              |                    |   |                      |   |           |   |              |   |                      |
| <b>TransactionCurrency</b> | Transaction Currency Codes e.g., INR, USD etc.  |              |                    |   |                      |   |           |   |              |   |                      |
| <b>ValidFrom</b>           | From date in DD.MM.YYYY format e.g., `3.06.2021   |              |                    |   |                      |   |           |   |              |   |                      |
| <b>ValidTo</b>             | To date in DD.MM.YYYY format e.g., 20.06.2021   |              |                    |   |                      |   |           |   |              |   |                      |
| <b>QuantityBase</b>        | Quantity Base input field e.g., 1   |              |                    |   |                      |   |           |   |              |   |                      |
| <b>PriceAmount</b>         | Price amount to be updated.   |              |                    |   |                      |   |           |   |              |   |                      |

## DESCRIPTION

Automate the process of changing the price for a given contract.

---

Desktop Agent

Bot has finished its work, Please carry on manually from this stage.

Ok

---

The bot has finished its work if this popup appears, user needs to proceed with creating Request.

## Key Process Flows

- The bot takes inputs from user.
- Opens transaction from any session of the SAP Logon (SAP GUI), without interrupting user's work

**Note:** Maximum number of Sessions should be below 6.

- Opens EA90 transaction in SAP Logon.
- Updates the given amount with given information.

## Business Benefits

- Reduce manual effort—an employee can concentrate on the more important tasks
- Ensure fast change of price at EA90.

## VERSION

The product versions used to generate this sample are detailed below. This sample is provided “as is,” with no warranty that it will work correctly with other versions. If some versions of your software are different (such as the tool version or the target application version), you may need to recapture the application and/or update the workflow activities.

### SAP Intelligent RPA

The table below details the versions used to generate this sample.

| Software      | Version   |
|---------------|-----------|
| Cloud Studio  | 2.0       |
| Desktop Agent | 2.0.10.58 |

| Target Application | Version |
|--------------------|---------|
| Saplogon.exe       | 750     |

The automation works on SAP GUI for Windows version 770 as well.

## **PREREQUISITES**

### **Global setup:**

SAP Intelligent Robotic Process Automation must be installed in accordance with the installation guide available [here](#). An SAP Intelligent RPA Factory must be available with a suitable environment and a hierarchy. All information can be found in the “Getting Started” section accessible via the above link.

### **Configuration:**

The bots are designed to be executed in attended mode only.
