

# Activation Accelerators - In-App Configuration for SAP S4HANA Cloud Scope item J59 (6PS)

## Task automation Capability and Feature Highlights

### THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the J59 scope item.

This process is very time-consuming, error-prone, and adds lot of manual effort.

### TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configurations using the values provided in the input configuration file:
  - Define Accounting Clerks
  - Business Rule Framework (BRF)+ Settings for Customer Balance Confirmation
  - Business Rule Framework (BRF)+ Settings for Item Interest Calculation
  - Business Rule Framework (BRF)+ Settings for Dunning Notice

### BUSINESS VALUE – BENEFITS

Automates the BRF+ and accounting clerks configurations (J59), which reduces manual effort and speeds up implementation process.
