

Spectar Group Digital Workforce

Who we are?

Spectar Group is a Melbourne based management consultancy focused on business transformations for our clients. Led by a pool of talented techno-functional experts in SAP, RPA, BPR and Test Automation, Spectar Group helps turn business strategy into commercial success. We provide support from multiple locations with presence in Australia (“core development center and headoffice”) India, Russia, and Europe.

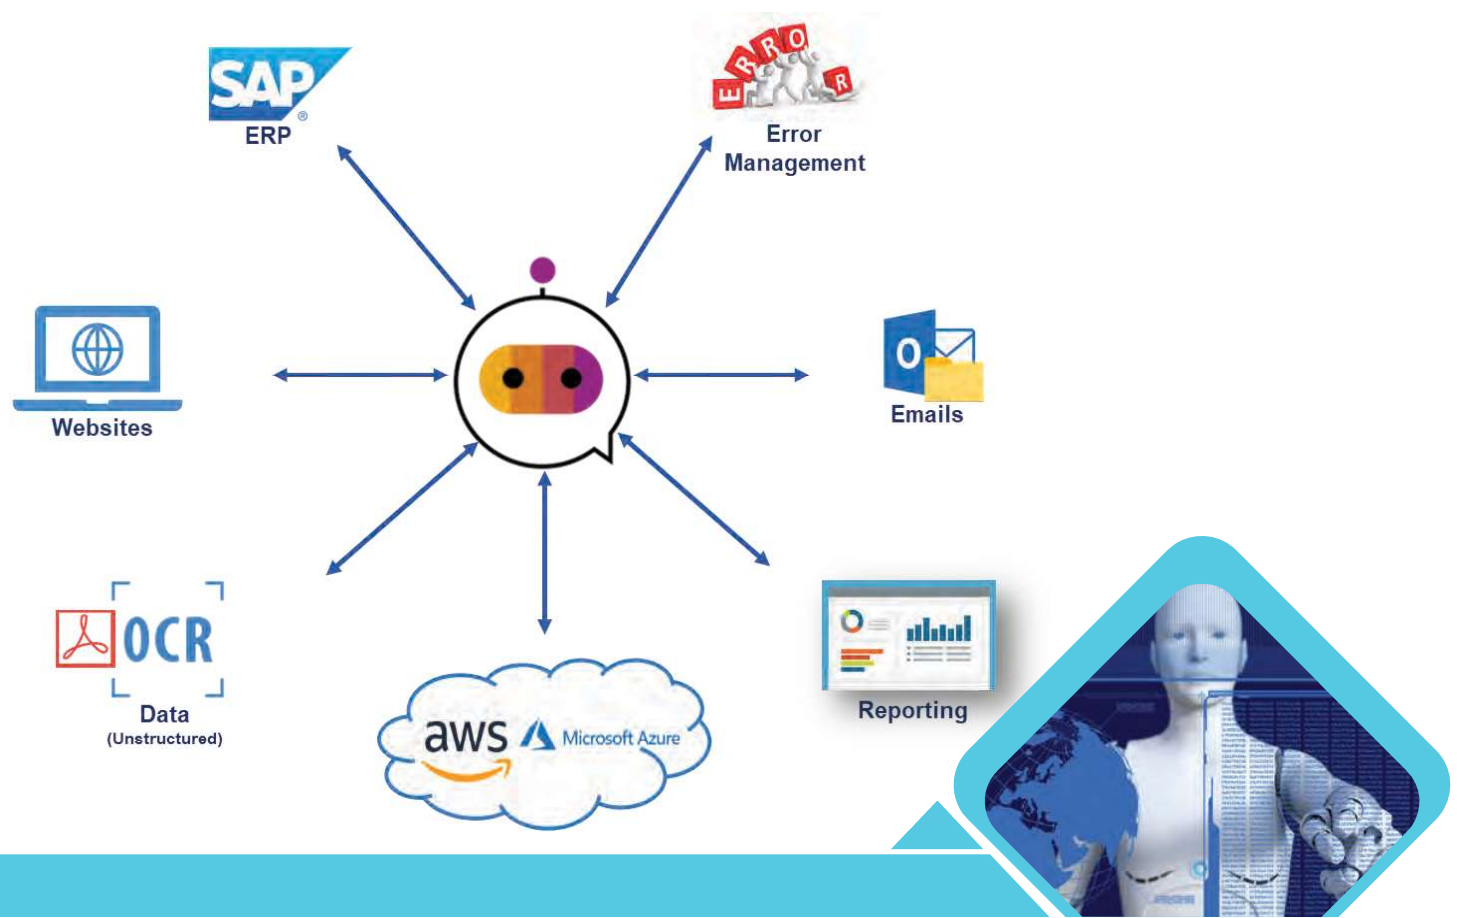

What is a digital worker?

Digital worker, as the name suggests, is a computerised version of a human worker best suited to perform repetitive tasks. Digital worker is best suited to perform tasks that are scripted and repetitive in nature to free your human workforce to concentrate on tasks that require human cognition and creativity.

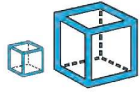

Robots: A good example of a candidate of a digital worker is an order taker. An order taker can read orders from the source (email or web), extract information from PDF, consolidate order into machine readable format, process order creation, and report on order creation statistics.

Humans: This leaves your human work force enough time to engage with customers, follow up on orders, spend time on upselling based on the order entered into the system.

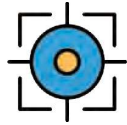

DigiAssist can perform the following tasks for you:

Benefits: Employing a Digital Worker leads to increased productivity, reduced cost, error free operations and improved customer experience. Employees free from mundane repetitive tasks, can focus on higher value business activities (upsell, customer interactions, sales strategies, product improvements or get involved in pricing strategies). In addition to quick ROI, DigiAssist leads to improved employee morale.

...scale up / down quick
in response to dynamic
market

...focus on core business
than non-core ops

...minimise waste aka
sub-optimal
implementations

...Optimise Capex/Opex
allocations

Spectar DigiAssist for SAP conceptually a simple proposition.

You, as client, purchase a digital worker from the SAP App Center.

We contact you to get any system specific configuration attributes.

We, configure & host your DigiAssist just like a new hire.

Like a new hire, the key to Digital Worker (DigiAssist) success hinges upon sufficient testing so that DigiAssist conforms to expectations.

- ◆ Spectar DigiAssist for SAP is a solution that does not modify your SAP system
- ◆ Since its based-on SAP technology and runs on SAP platform, it integrates seamlessly with you SAP routines. Also, its not reliant on plug-ins.
- ◆ Since DigiAssit still works within the SAP Ecosystem, all best practices that you have developed are adhered to.

All that client needs to install is an SAP Intelligent RPA desktop agent (digital worker).

Spectar DigiAssist for SAP sends execution logs to you internal Controls Team for

Try Us

Contact Spectar team for a demonstration in our live environment (yes, we do have trial and demo systems in-house) or better in your system (this way you see it working in your system and on your data).

What's on the horizon?

Spectar DigiAssist is available in areas such as procurement, invoicing, logistics etc. offering the same ease-of-use and consistent user experience. Our team is busy developing new and existing solutions for our SAP users to allow them to be more productive.
