

# Activation Accelerators - In-App Configuration for SAP S/4HANA Cloud Scope Item J58 (6PR)

## Task automation Capability and Feature Highlights

### THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the J58 scope item.

This process is very time-consuming, error-prone, and adds lot of manual effort.

### TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configurations using the values provided in the input configuration file:
  - Manage Workflows for Journal Entry Verification - In General Ledger
  - Manage Teams and Responsibilities for Journal Entry Verification - In General Ledger

### BUSINESS VALUE – BENEFITS

Automate the workflow, teams and responsibilities, and other settings (J58), which reduces manual effort and speeds up implementation process.
